

SolidfloorTM The professionals choice

As part of the Fetim Group, Solidfloor has a rich history with wood dating back to 1919. It all started with a small assortment of wooden floors in which craftsmanship, design and convenience were important pillars. As a result, Solidfloor steadily grew and became a true name in the interior branch.

A history that we are proud of. Over time, the range has been enriched whilst the philosophy remained unchanged: be innovative in production and design and strive for the highest quality. Each pillar is also reviewed from a sustainable and user friendliness perspective. Following these principles, no concessions need to be made when it comes to comfort, sustainability and style. Gradually a complete collection has been formed with endless possibilities. For every interior there's a perfect matching Solidfloor.

For this reason Solidfloor has been awarded with the title 'The professional's choice'.

NATURE AS OUR INSPIRATION

Nature gives us everything we require. At Solidfloor we are inspired by its greatness, fierceness and peacefulness. With over 100 years of experience in working with wood products, it has become part of our DNA. It is our craft. With the ultimate respect for its raw material, we transform wonderful timber into longlasting products. Instead of altering materials, we work together with our products.

Our Solidfloor mission is to provide a majestic range of floors, on which we all love to Live, Work, and Play. It is long lasting, easy to maintain and manufactured to our strict standards

of sustainability and environmental responsibility.

To be innovative and open-minded is essential, striving to do better and adapt when better options are available. There's a great value in upholding traditions, and by adapting to the new times, ensuring to remain relevant. Based on these core-values, Solidfloor has been the professional's choice for many decades.

Welcome to the world of Solidfloor.
Welcome home.

THE HISTORY OF SOLIDFLOOR

As part of the Fetim Group, Solidfloor has a rich history in woodworking dating back to 1919. It all started with a small selection of wooden floors in which craftsmanship, design and convenience were important pillars. As a result, Solidfloor steadily grew and became a true household name in the interior branch. A history that we are proud of. Over time, the range has been enriched whilst the philosophy remained unchanged: be innovative in production and design and strive for the highest quality. Each pillar is also reviewed from a sustainable and user friendliness perspective. Following these principles, no concessions need to be made when it comes to comfort, sustainability and style. Gradually, a complete collection has been formed with endless possibilities. For every interior there's a perfect matching Solidfloor. For this reason Solidfloor has been awarded with the title 'The professional's choice'.

SOLIDFLOOR COMMITTED TO SUSTAINABILITY

Sustainability is a term widely used in corporate communication and has gained popularity in recent years. For everyone, the term can be defined somewhat differently, which sometimes causes some confusion. At Solidfloor we define sustainability as a construction consisting of three pillars:

1. Production, in which the location and raw materials used are reviewed;
2. Durability, the pillar where quality and wear resistance is tested, and;
3. The extent to which the product contributes to an energy-efficient life.

The difference between our floors

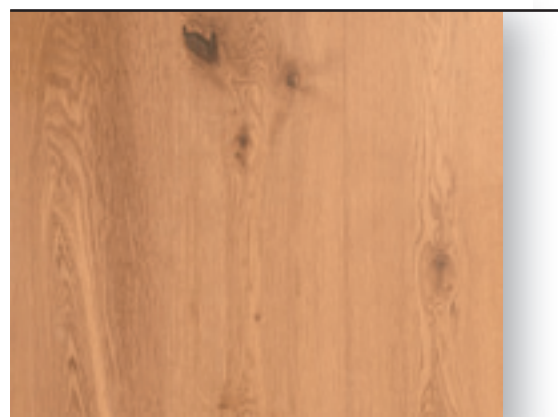

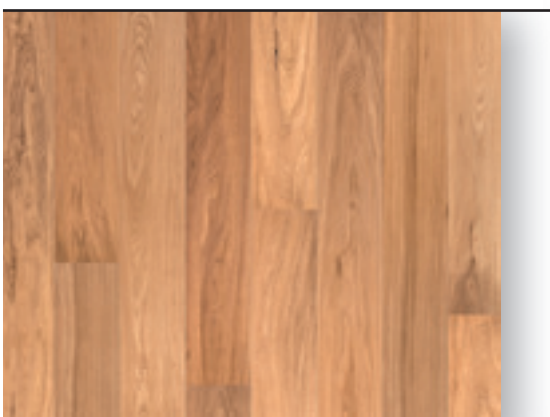

NATURE GRADE

Our classification with the 'calmest' visual appearance. All Nature Graded floors have a tranquil and peaceful look to it. Only limited and small knots are allowed. For this reason, floors from our Nature Grade selection fit perfectly in Modern and Scandinavian interiors.

MILL RUN

Our Mill Run selection can be described as a mixture between Nature Grade and Rustic Grade. The floors made from our Mill Run selection are for this reason very dynamic and exciting. These floors for both rustic as well as calm interior styles.

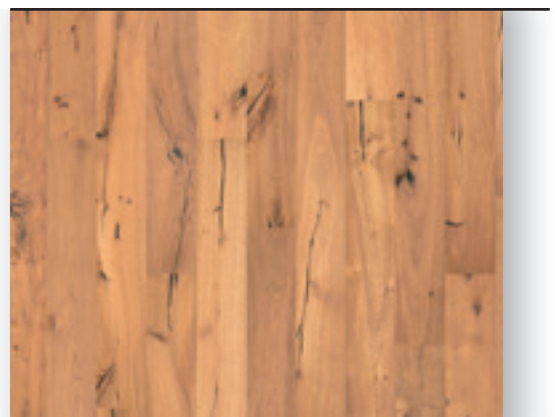

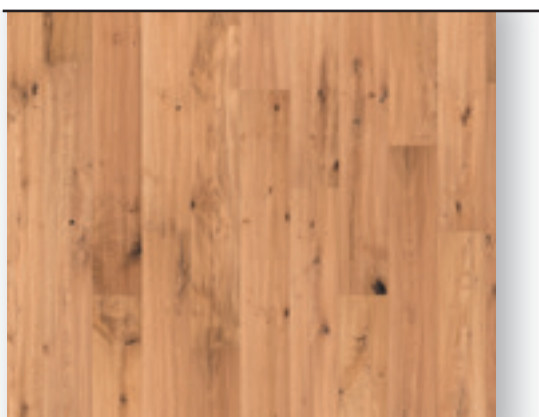

RUSTIC GRADE

Floors with a rustic classification have lively and playful appearances. They show a variation of vibrant knots and some limited cracks. Every plank is unique. These floors fit perfectly in rural interior styles.

RUSTIC GRADE +

Rustic Grade + classification has the same selection criteria as our regular Rustic Grade with the exception of allowing for wider cracks and end cracks. This results in an extremely lively appearance which fit perfectly in rural and industrial interiors.

ORIGINALS

GLACIERS

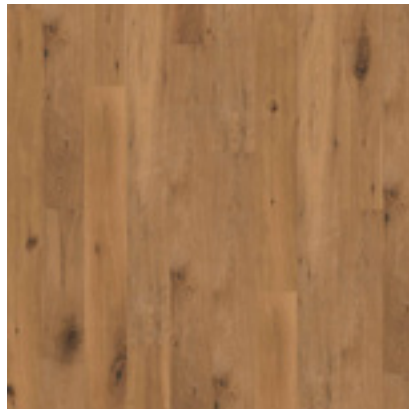

The floors from the Glaciers collection owe their name to the lacquered finish. Although the lacquer layer is matte, its combination with the flat surface makes the floors appear smooth and shiny, just like ice. The so-called ASML finish also has an additional advantage, as it is anti-scratch and guarantees exceptional durability.

RENOPARK

FLOORS WITH A FOCUS ON CONVENIENCE AND SIMPLICITY

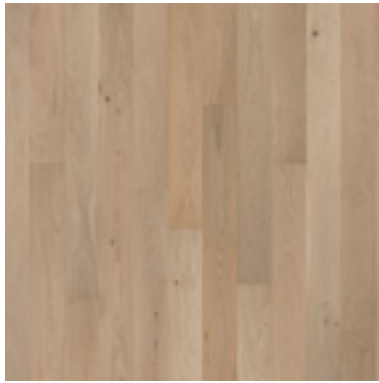

All floors from the Renopark collection have a focus on convenience and simplicity. For example, the floor is provided with a high-quality High Solid Oil for extra wear resistance. Due to the compact construction and total thickness of 10 mm, the floor is very suitable for hydronic underfloor heating and is ideal for renovation projects. For optimal heat conduction, these floors should be installed fully glued.

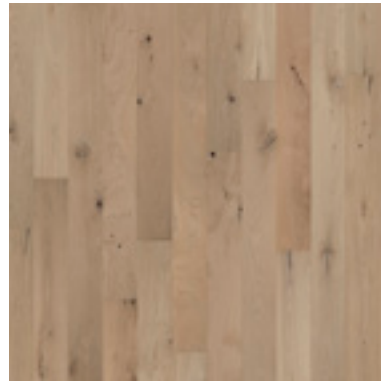

RENOPARK

RENOPARK PLANK

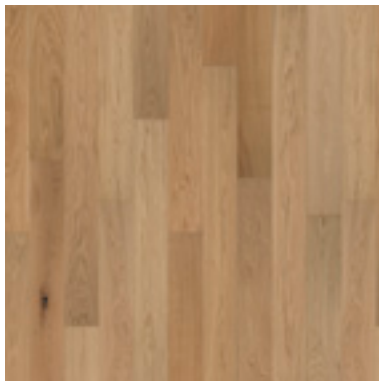

The planks of Renopark Plank are laid parallel to each other in straight lines, creating a uniform, linear appearance on the floor. It is ideal for those who prefer a more traditional, rustic style in their interiors.

HEAT

ENERGY-EFFICIENT LIVING WITH SOLIDFLOOR HEAT

Solidfloor has added a subcategory within its wood flooring range: Solidfloor Heat. As the name suggests, these floors have been specially designed to be combined with underfloor heating. Because the carrier and top layer are exceptionally thin, thermal conductivity is extremely efficient. This is due to innovative production processes, which are not at the expense of quality and living comfort. With a certified thermal resistance of only 0.08, the entire Solidfloor Heat range has the best thermal conductivity of all wooden parquet floors currently available.

HEAT

NATURE PLANK

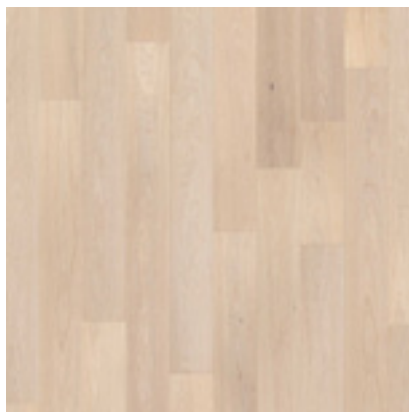

The top layer is made of high quality oak in which two different wood selections can be chosen: Nature grade and Rustic grade. The Rustic grade allows for more knots and color shades between the boards, which makes the floors more vivid. With Nature Grade, it is the other way around, allowing fewer knots and shades of color. It gives the floors a calm and modern look.

MINERAL WOOD

REAL WOOD ON A MINERAL CORE

Discover the groundbreaking Solidfloor Mineral Wood collection – a fusion of genuine wood veneer on a remarkably stable magnesium core (SPC). This innovation improves the resilience of the floor against temperature fluctuations, making it an excellent choice for pairing with underfloor heating (hydronic). The floor seamlessly combines the steadfastness of ceramic tiles with the timeless allure of authentic oak wood veneer, ensuring no compromises between comfort and design.

MANSSION PVC

ELEGANT, DURABLE AND PRACTICAL

All Solidfloor vinyl floors are waterproof, making them suitable for wet rooms or spaces such as bathrooms and kitchens. Another great advantage of SPC is that it has a sound-absorbing effect, and feels pleasant to the feet. Solidfloor's SPC range is made up of two different collections: Basic and Mansion. The floors of the Basic are 4 mm thick and the floors of the Mansion collection have a thickness of 4.5 mm.

ECO

100% PVC FREE, 100% RECYCABLE

Introducing Solidfloor ECO:
Your Path to Sustainability

Discover our brand-new Solidfloor ECO collection! These LVT floors are a true testament to sustainability, as they are not only 100% PVC-free but also entirely recyclable. What sets these floors apart is their composition, made entirely of Polypropylene (PP); from the subfloor to the ultra-matte top layer. PP stands out as one of the most environmentally responsible plastics, offering easy recyclability and a reduced environmental footprint during production.

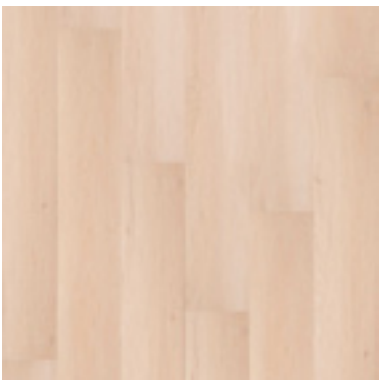

ECO

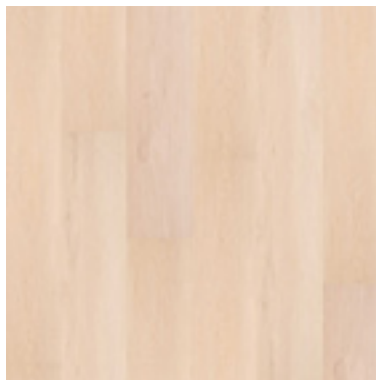

ECO

The remarkable feature of these floors is their end-of-life sustainability. When it's time to say farewell to your Solidfloor ECO, you can do so effortlessly by disposing of it with your regular household plastic waste. No complex separation or return process is required. Your old floor gets the opportunity to embark on a fresh journey as a new floor or any other product. In addition to its recyclability, PP's lightweight nature makes transportation more efficient, further minimizing our ecological impact. By choosing Solidfloor ECO, you're making a conscious choice for a cleaner future for our planet.

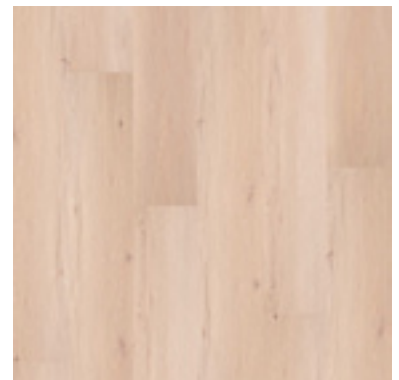

Explore Solidfloor ECO today and pave the way for a greener tomorrow.
